The global Medical Poly (lactic-co-glycolic acid) (PLGA) market size is predicted to grow from US\$ 93.06 million in 2025 to US\$ 220 million in 2032; it is expected to grow at a CAGR of 13.3% from 2026 to 2032.

Medical is one of the most successfully developed biodegradable polymers. PLGA, PLG, or poly(lactic-co-glycolic acid) (CAS: 26780-50-7) is a copolymer which is used in a host of Food and Drug Administration (FDA) approved therapeutic devices, owing to its biodegradability and biocompatibility.

Medical Poly (lactic-co-glycolic acid) (PLGA) is a biodegradable copolymer widely used in drug delivery, tissue engineering, and medical devices due to its excellent biocompatibility and tunable degradation rate. It is a preferred material for producing microspheres, nanoparticles, absorbable sutures, and bone repair scaffolds. With the advancement of precision medicine and regenerative therapies, demand for PLGA is rapidly increasing. The growing elderly population and rise in chronic diseases globally drive the need for innovative drug delivery systems and implantable materials, boosting the PLGA market. Particularly, emerging markets in the Asia-Pacific region, including China and India, contribute significantly to growth due to increased healthcare investments. Future PLGA developments will focus on higher molecular weights, customization, and composite materials to meet complex clinical needs.
