The global Medical Polyglycolic Acid (PGA) market size is predicted to grow from US\$ 1326 million in 2025 to US\$ 2008 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

PGA is a synthetic polymer material with good biodegradability and biocompatibility. Unlike traditional polymer materials with stable performance such as plastics and rubber, PGA as a material gradually degrades after a certain period of use, and eventually it turns into water and carbon dioxide that are harmless to the human body, animals, plants and the natural environment. It is one of the polymer materials with the best degradation performance currently known.
