Medical polymer microspheres refer to polymer materials or polymer composite materials with a diameter ranging from nanometer to micrometer and a spherical or other geometric shape. These microspheres have broad application prospects in the medical field, such as drug preparation, delivery, analysis and detection, etc. Specifically, the drugs in medical polymer microspheres can be dissolved or dispersed in the ball-forming material to form skeleton-type micro-spherical or spherical-like particles. These microspheres have excellent properties such as fluidity, biocompatibility, functional group properties, surface effect, and volume effect, and thus can play an important role in the medical field.

The global Medical Polymeric Microspheres market size is projected to grow from US\$ 135 million in 2024 to US\$ 202 million in 2030; it is expected to grow at a CAGR of 7.1% from 2024 to 2030.
