Medical PTFE Coated Guidewire is a specialized interventional medical wire designed to guide and support catheters, balloons, stent-delivery systems, and other minimally invasive devices through the body's vascular and non-vascular pathways. It consists of a stainless-steel or nitinol core that provides the necessary torque control, pushability, and flexibility for navigating complex or tortuous anatomical structures. The wire's surface is coated with polytetrafluoroethylene (PTFE), which significantly reduces friction, enabling smoother advancement, improved trackability, and reduced risk of tissue trauma during clinical procedures. Medical PTFE coated guidewires are widely used in cardiovascular interventions, peripheral vascular procedures, urology, gastroenterology, and interventional radiology, where precise device placement and atraumatic navigation are essential.
