The global Medical Rescue Transfer market size is predicted to grow from US$ 1520 million in 2025 to US$ 2544 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

Air medical transfer refers to the use of helicopters, fixed-wing aircraft, or other aircraft to rapidly transport critically ill patients, injured individuals, or those experiencing public health emergencies from accident sites or primary healthcare facilities to high-level medical institutions with treatment capabilities. This model, with its advantages of speed, wide coverage, and flexible response, is widely used in scenarios such as natural disasters, major traffic accidents, emergency response in remote areas, and cross-regional medical support, and is a vital component of the modern medical emergency response system.

With accelerating urbanization, uneven distribution of medical resources, frequent emergencies, and rising health awareness among high-net-worth individuals, global demand for air ambulance services continues to expand. Many countries have incorporated air ambulance services into their emergency medical systems and are implementing policies to promote the opening of low-altitude airspace and the standardization of aviation medicine.

Currently, the market is trending towards intelligent, integrated, and professional development. The development of air-ground coordinated rescue systems is accelerating, and intelligent dispatch platforms are gradually integrating with telemedicine technologies, significantly improving response efficiency and treatment outcomes. Furthermore, governments, businesses, hospitals, and insurance institutions are working together to shift operational models from public welfare to market-oriented

and scaled-up operations. Emerging markets such as China and India are experiencing rapid growth, while countries like Europe and the United States are leading the way in systematic operations and service standards. The global air ambulance industry is entering a period of rapid development.
