## Abstracts

The global Medical Self-adhesive Dialysis Paper market size is predicted to grow from US$ 801 million in 2025 to US$ 1414 million in 2032; it is expected to grow at a CAGR of 8.5% from 2026 to 2032.

In 2025, global sales of medical self-adhesive dialysis paper reached 89,000 metric tons, with an average selling price of $9,200 per ton. Global production capacity stood at approximately 116,000 tons, and the industry's overall gross profit margin was around 34%. Medical self-adhesive dialysis paper is a functional material designed for medical sterilization packaging systems; it utilizes an integrated pressure-sensitive adhesive layer to form a self-sealing bond with medical films, paper-plastic composites, or non-woven fabrics, while maintaining the material's inherent breathability, microbial barrier properties, and permeability to sterilization media (such as ethylene oxide, steam, or plasma). It is primarily used for the packaging and long-term sterile maintenance of surgical instruments, disposable medical consumables, and sterile medical kits. Its core function is to ensure sterilization efficacy while enabling safe, visible, and contamination-free opening. Upstream raw materials include medical-grade wood pulp paper, medical-grade pressure-sensitive adhesives (predominantly acrylic-based), breathable coating materials, and sterile-functional coatings. The midstream sector involves coating, lamination, precision adhesive application, and slitting processes, while downstream distribution reaches hospital Central Sterile Supply Departments (CSSDs), medical device manufacturers, and medical packaging enterprises. Future development will focus on high-barrier nano-coatings, materials compatible with low-temperature high-efficiency sterilization, and traceable smart sterilization packaging (utilizing RFID or QR codes). Demand growth is driven by the rising volume of global surgeries, the widespread adoption of disposable sterile consumables, and stricter standards for medical infection control; business

opportunities are concentrated in the domestic substitution of high-end sterilization packaging materials and the integration of smart medical packaging systems.
