Medical Specimen Container is a medical container designed for the collection, preservation, identification, transport, and temporary storage of biological specimens for laboratory testing. It is commonly used for urine, stool, sputum, blood, tissue, and other clinical samples. Depending on the application, containers may include leak-resistant closures, sterile packaging, graduations, labels, preservatives, or specialized collection structures. Plastic is widely used for routine disposable containers because of its low weight, durability, and suitability for high-volume production, while glass remains relevant for selected applications. Key requirements include sealing performance, cleanliness, chemical compatibility, and preservation of specimen integrity.

The upstream industry supplies medical-grade plastics, glass, elastomer sealing materials, caps, labels, preservatives, sterilization materials, and packaging components. The midstream industry performs molding, forming, assembly, sterilization, labeling, inspection, and packaging to manufacture finished specimen containers.
