The medical supplies supply chain management platform is a digital management system that integrates procurement, inventory, distribution, traceability, and data analysis. It is designed specifically to optimize the flow and allocation efficiency of medical supplies for medical institutions, pharmaceutical companies, and distributors. Through information technology, the platform enables full-process visual management of medical consumables, pharmaceuticals, protective equipment, and other supplies, improving inventory turnover efficiency, reducing waste risks, and supporting emergency response, batch traceability, and compliance monitoring. It is a key tool for enhancing the supply chain security capabilities of modern hospitals and public health systems.

As the healthcare system rapidly evolves towards digitalization and refinement, medical supply supply chain management platforms are becoming a core tool for hospitals, pharmaceutical companies, and government agencies to improve operational efficiency and risk management capabilities. Especially after public health events such as the COVID-19 pandemic, medical institutions at all levels have placed higher demands on their supply chain capabilities, driving the industry to upgrade from traditional manual management to a modern supply chain system characterized by "platformization, automation, and data-driven management." These platforms not only address long-standing pain points such as supply shortages and inventory backlogs, but also enhance procurement transparency and process compliance.
