Surgical suture is a medical device used to hold body tissues together after an injury or surgery.

A significant driver in the medical surgical sutures market is the growing number of surgical procedures worldwide. With the rising demand for surgical interventions, there is a corresponding increase in the need for reliable and advanced sutures to close wounds effectively. However, a notable challenge in this market is the shift towards minimally invasive surgeries, which often require fewer or no sutures. This trend, along with the demand for cost-effective healthcare solutions, poses a challenge to the traditional suture market. Manufacturers must adapt by developing innovative suture materials and technologies that cater to evolving surgical techniques and preferences

while ensuring safety and efficiency in wound closure.
