The global Medical Teaching Model Instrument market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Medical education model instruments are medicine-related models and related instruments and equipment that are used for teaching to simulate certain parts of the human body. Mostly made of PVC material, the teaching models vividly display the functions and characteristics of certain parts of the human body. Teaching models often encountered in medicine include: cardiopulmonary resuscitation training models, diagnostic skills training models, gynecological examination training models, nursing skills training models, human skeleton series models, human acupuncture series models and human torso series models, etc.

The global medical device market is estimated to be US\$603.3 billion in 2023, with a compound annual growth rate of 5% expected in the next six years. Global health care expenditure currently accounts for approximately 10% of global GDP, and the proportion will continue to increase in the next few years. This is primarily due to the increasing demand for healthcare from an aging population, the rising prevalence of chronic and infectious diseases, and the expansion of emerging markets. The medical device market plays an important role in the healthcare spending industry. The medical device market is driven by a variety of factors, including increasing global demand for advanced medical services, advancements in medical technology, growing geriatric population, increasing medical expenditures, and increasing awareness of early stage disease diagnosis and treatment.
