Medical vacuum mattress is a specialized immobilization device used in emergency medical situations to secure and stabilize patients with suspected spinal or orthopedic injuries. It consists of a durable, airtight mattress filled with tiny polystyrene beads or similar material. Once the patient is positioned on the mattress, air is removed using a vacuum pump, causing the mattress to mold around the patient's body contours, providing firm support and minimizing movement during transportation. This immobilization helps prevent further injury to the spine or affected limbs and ensures safe transfer to medical facilities for further evaluation and treatment.

The global Medical Vacuum Mattress market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
