A Medical X-ray Inspection System is a diagnostic imaging device that uses X-rays to create visual representations of the internal structures of the body. These systems are commonly used in healthcare settings to detect and diagnose various medical conditions, such as fractures, infections, tumors, or foreign objects within the body. The system typically consists of an X-ray source, a detector or imaging plate, and a display system that processes and visualizes the images.

In addition to traditional radiography, medical X-ray inspection systems may include advanced technologies such as computed tomography (CT), which provides cross-sectional images, or fluoroscopy, which allows real-time X-ray video. These systems help healthcare professionals make accurate diagnoses and guide treatment decisions.
