An x-ray tube is an energy converter. It receives electrical energy and converts it into two other forms: x-radiation and heat. The heat is an undesirable byproduct. X-ray tubes are designed and constructed to maximize x-ray production and to dissipate heat as rapidly as possible. The x-ray tube is a relatively simple electrical device typically containing two principle elements: a cathode and an anode. As the electrical current flows through the tube from cathode to anode, the electrons undergo an energy loss, which results in the generation of x-radiation. Medical X-Ray Tube is mainly used to get image information of human body for diagnosis and treatment.

Global Medical X-Ray Tube key players include GE, Varex Imaging (Varian), Canon Electron (Toshiba), Siemens, Dunlee, etc. Global top five manufacturers hold a share about 75%.
