Medical billing software is computer software designed to simplify the medical billing process. Medical billing can be very complicated, especially when medical institutions are working with multiple government agencies and private consumers to process bills to multiple insurance companies. All these groups may require different billing procedures. In addition to generating bills, the software is also used to track payments. Medicare billing involves the exchange of numerous codes between the provider or hospital and the insurance company. Rejected claims are transferred back and forth until all issues are resolved. This is a lengthy process which delays payments to a large extent.
