Medicinal activated charcoal, also known as activated carbon, is a form of charcoal that has been specially processed to increase its surface area and absorptive properties. It is created by heating charcoal or carbon-rich materials, like wood or coconut shells, to a high temperature with steam or chemicals. This process creates a porous structure with millions of tiny pores that can trap and bind certain chemicals, toxins, or gases.

Medicinal activated charcoal is primarily used in medical and healthcare settings, both internally and externally, to treat certain poisonings, drug overdoses, and to filter out harmful substances in water or air purification systems.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high

costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
