The global Medium-chain Triglycerides (MCT) market size is predicted to grow from US\$ 610 million in 2025 to US\$ 868 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Medium chain triglycerides (MCTs) are a class of lipids in which three saturated fats are bound to a glycerol backbone. What distinguishes MCTs from other triglycerides is the fact that each fat molecule is between six and twelve carbons in length. MCTs are a component of many foods, with coconut and palm oils being the dietary sources with the highest concentration of MCTs. MCTs are also available as a dietary supplement. In 2025, global Medium-chain Triglycerides (MCT) production reached approximately 120 K MT.

The primary driver of the Medium-chain Triglycerides (MCT) market is rising demand from the health, wellness, and functional nutrition sectors. MCTs are widely used in dietary supplements, sports nutrition, ketogenic diet products, meal replacements, and weight-management formulations because they are rapidly absorbed and used as an energy source. Consumer interest in low-carb diets, clean-label nutrition, and convenient energy-support products continues to support demand for MCT oil, powders, and blended formulations.

A second major driver is the growing use of MCTs in food, beverage, and personal care applications. In food and beverages, MCTs are used in coffee creamers, protein shakes, nutrition bars, infant nutrition, and specialty dietary products. In cosmetics and personal care, they are valued as lightweight emollients, carriers, and texture-enhancing ingredients in creams, lotions, oils, and skincare formulations. This broad application base makes MCT demand less dependent on a single end market.

The third driver is expanding demand from pharmaceutical and medical nutrition applications. MCTs are used as excipients, carriers, and energy sources in formulations where easy digestion and rapid absorption are important. They are also used in clinical nutrition products for patients with fat malabsorption or special dietary needs. As healthcare, aging populations, and specialized nutrition markets grow, MCTs are increasingly positioned as a functional lipid ingredient with applications beyond conventional food and supplement markets.
