Medium Duty top entry agitators and mixers are suitable for applications like yeast fermentation, starch storage, storage and blending of concentrated fruit juices, bitumen and paint production.

Top Entry Agitators are industrial equipment used to mix, stir, agitate, homogenize, or bring together different components in liquids or gases. These agitators are typically located on top of a vessel or tank and achieve mixing by means of mixing blades, propellers, blades, or other types of agitating elements. Top-mounted agitators are commonly used in industrial fields such as liquid handling, chemical reactions, biopharmaceuticals, food production, oil processing, water treatment, and some research laboratories. Their design and selection usually depends on the nature of the material being processed, the geometry of the container, mixing requirements and other factors. Top-mounted agitators thoroughly mix components in liquids or gases, ensuring uniform distribution. In a chemical reaction, the agitator can increase the reaction rate, making the reaction more rapid and efficient.
