The medium-free holographic projection technology is an advanced display technology that allows image information to be presented directly in the air in three-dimensional images without any physical carrier or medium. This technology replicates the light field through a specific optical micro-mirror structure, so that the three-dimensional real image can be reproduced in three-dimensional space. The medium-free holographic projection technology realizes aerial imaging visible to the naked eye, without any medium, and users can directly observe the three-dimensional image. With its unique aerial imaging characteristics, the medium-free holographic projection technology has brought people an unprecedented visual experience and has shown broad application prospects in multiple industries. With the continuous development and improvement of the technology, its application areas are expected to expand further.
