The global Medium Frequency Fixed Spot Welding Machine market size is predicted to grow from US$ 675 million in 2025 to US$ 964 million in 2031; it is expected to grow at a CAGR of 6.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The medium frequency fixed spot welding machine is a resistance spot welding device controlled by a medium frequency inverter DC power supply. It uses three-phase input and variable frequency inverter (generally 1000Hz~2000Hz) to output DC welding current, which can effectively improve welding thermal efficiency and welding quality. This type of equipment is usually a fixed structure, with the welding head or electrode set in a fixed position, and pressurized by a cylinder or servo system to achieve efficient spot welding connection of metal workpieces. Compared with industrial frequency AC spot welding machines, medium frequency spot welding machines have the advantages of fast current response, concentrated heat, small welding deformation, and low grid load. They are especially suitable for welding difficult-to-weld materials such as high-strength steel, galvanized sheets, and aluminum alloys. They are indispensable key equipment in modern industrial production.

United States market for Medium Frequency Fixed Spot Welding Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
