The global Medium Frequency Ozone Generation Systems market size is predicted to grow from US\$ 387 million in 2025 to US\$ 477 million in 2032; it is expected to grow at a CAGR of 3.1% from 2026 to 2032.

A Medium Frequency Ozone Generation System is a device used for producing ozone gas (O₃) using medium-frequency electrical discharges.

Medium Frequency Ozone Generation Systems are designed to efficiently generate ozone for these purposes. A medium-frequency alternating current (AC) voltage is applied to the electrodes. This voltage typically operates in the radio frequency (RF) range, which is usually between 10 kHz and 100 kHz. The medium-frequency AC voltage is used to create an electrical discharge between the electrodes. When the medium-frequency voltage reaches a certain level, it ionizes the surrounding oxygen molecules in the air, creating a corona discharge. This discharge generates highly energetic electrons and ions.
