Abstracts

The global Medium-High-Pressure Liquid Ring Compressors market size is predicted to grow from US$ 583 million in 2025 to US$ 820 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

In 2024, global production of medium- and high-pressure liquid ring compressors will reach 147,500 units, with an average selling price of US$3,850 per unit.

A medium- and high-pressure liquid ring compressor is a positive displacement gas compression device based on the liquid ring compression principle. Its core structure consists of a pump body, impeller, liquid ring forming system, and drive unit. During operation, an appropriate amount of working liquid (such as water or industrial oil) is injected into the pump chamber. As the impeller rotates, centrifugal force causes the liquid to form concentric liquid rings, dividing the pump chamber into multiple crescent-shaped working chambers. The periodic volume changes caused by the impeller's rotation achieve gas intake, compression, and discharge. Its exhaust pressure can typically reach over 0.1 MPa (in the medium and high pressure range). It is suitable for industrial applications requiring gas compression to higher pressures, such as chemical gas boosting, oil and gas recovery, and vacuum system backpressure regulation. It combines compact structure, stable operation, and adaptability to liquid-gas conditions, making it a key gas compression device between liquid ring vacuum pumps and high-pressure centrifugal compressors.

The industry chain of medium and high pressure liquid ring compressors covers three major links: upstream raw material and core component supply, midstream manufacturing technology integration and downstream terminal application. The upstream is centered on special steel (such as stainless steel 316L, duplex steel),

seals, bearings, motors and liquid ring sealing fluids. Key components are provided by Baosteel, Tata Steel, Kobe Steel (special steels), Germany's MANN+HUMMEL (seals), Japan's NSK (bearings), and other companies. Chemical companies such as BASF and Dow Chemical supply special sealing fluids such as concentrated sulfuric acid. The midstream is divided into international leaders, domestic companies and emerging technology-driven companies. International leaders such as Atlas Copco and Gardner Denver dominates the high-end market, Honeywell strengthens its layout in the process industry by acquiring Shengdyne, domestic companies such as Shanghai Shangcheng Pumps and Valves and Bozhong Industrial Equipment focus on fluoroplastic magnetic pumps and MVR evaporation systems in the pharmaceutical and chemical industries, and emerging technology companies such as Qingyu Pumps, Suli Pumps and Valves, and Huaxing Group promote intelligence and energy efficiency; downstream products are widely used in high-corrosion, high-vacuum and medium- and high-pressure gas treatment scenarios, including chemical pharmaceuticals, new energy, environmentally friendly food, semiconductor medical, industrial energy and other fields, forming an industry trend of material upgrading, process integration, and terminal binding.
