## **Abstracts**

The global Medium and High Voltage Cable System Testing Service market size is predicted to grow from US\$ 954 million in 2025 to US\$ 1386 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

To address the challenges of accurately assessing the insulation status of medium- and high-voltage cables after installation, the threat posed by hidden defects to the main grid's operational safety, and the potential damage to cross-linked polyethylene insulation caused by traditional testing methods, medium- and high-voltage cable system testing services have emerged. Since the large-scale undergrounding of urban power grids in the early 21st century and the rapid increase in the application mileage of medium- and high-voltage cables, the field of power equipment testing and diagnosis has developed significantly. Currently, medium- and high-voltage cable system testing services have evolved into a comprehensive service encompassing various types, including oscillating wave partial discharge detection, ultra-low frequency dielectric loss testing, AC variable frequency withstand voltage testing, and distributed partial discharge monitoring and location. These services are widely used in power grid infrastructure acceptance, operation and maintenance, tunnel and pipe gallery inspections, and industrial power systems, providing a professional technical means to accurately assess cable insulation health and effectively prevent unplanned outage risks.

United States market for Medium and High Voltage Cable System Testing Service is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
