The frequency converter is a power control device that uses frequency conversion technology and microelectronics technology to control the AC motor by changing the frequency of the motor's working power supply. The inverter is mainly composed of rectification (AC to DC), filtering, inverter (DC to AC), braking unit, drive unit, detection unit and micro-processing unit. The inverter relies on the internal IGBT switch to adjust the voltage and frequency of the output power supply, and provides the required power supply voltage according to the actual needs of the motor, thereby realizing the purpose of soft start, energy saving and consumption reduction, and variable frequency speed regulation of the AC asynchronous motor. In addition, the inverter has many protection functions, such as overcurrent, overvoltage, overload protection and so on.
