The global Medium Phosphorus Electroless Nickel Plating Solution market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Medium phosphorus electroless nickel plating solution is a solution containing metal nickel salts and phosphates, used to deposit nickel-phosphorus alloy coatings on metal surfaces. During this process, nickel ions are reduced to metallic nickel, and phosphate ions are also reduced to form a nickel-phosphorus alloy containing a certain proportion of phosphorus. The phosphorus content in medium phosphorus electroless nickel plating liquid is usually between 5% and 8%. This kind of coating has good corrosion resistance and certain hardness, and is suitable for a variety of metal and non-metal surfaces. It is widely used in various industrial fields such as electronics, machinery and petroleum industries as it provides uniform, dense and bright coatings.
