Radar is an object-detection system that uses radio waves to determine the range, angle, or velocity of objects.

Dielectric radar systems are widely used in many fields, including aerospace, military, unmanned driving, intelligent transportation, etc. In the field of unmanned driving, dielectric radar can provide accurate target distance, speed and angle information, helping vehicles achieve automatic navigation, obstacle avoidance, parking and other functions. In the field of intelligent transportation, dielectric radar can be used for vehicle monitoring, flow control and other functions. In addition, dielectric radar is also widely used in homeland security, environmental monitoring, resource development and other fields. In the future, with the further development of dielectric radar technology and the continuous reduction of costs, its application fields will be further expanded, such as applications in smart manufacturing, smart homes, smart cities and other fields.
