Medium voltage cross-linked cable is a type of power cable used in medium voltage applications. Medium voltage cables generally refer to cables with a rated voltage between 1kV and 35kV. Medium voltage cross-linked cables consist of multiple insulated conductors, each of which is wrapped by insulating material and then by an outer sheath. The insulating material is usually cross-linked polyethylene (XLPE). Medium-voltage XLPE cables have the following characteristics: 1. High withstand voltage: medium-voltage XLPE cables can withstand higher voltages, usually between 1kV and 35kV. 2. Good electrical performance: medium voltage cross-linked cables have low resistance and capacitance and can provide good electrical performance. 3.

Heat resistance: The insulating material of the medium-voltage XLPE cable has high heat resistance and can work normally in a high temperature environment. 4. Chemical corrosion resistance: The insulation material and outer sheath of medium voltage XLPE cables have strong chemical corrosion resistance and can be used in various chemical environments. 5. Safe and reliable: Medium-voltage XLPE cables meet the safety requirements of international and domestic standards and can provide reliable electrical connections. Medium-voltage cross-linked cables are widely used in power systems, industrial fields, internal wiring of buildings, etc., for the transmission and distribution of electrical energy.
