“Medium Infrared”, “IRB” or “Medium Wave “ infrared heaters operate between 1.4 to 3 microns and emit temperatures of 500 – 800°C and produce a deep red light (like bar fires). The use of medium wave infrared heaters helps in the effective drying of paints and lacquers and in the economical processing of plastic foils and sheet. Because of their long life, these heaters are best suited for continuous process. Surface films and very thin materials are heated up extremely efficiently.

The Medium Wave Infrared Heater market is driven by several factors, including:

- Energy efficiency and cost savings:** Medium wave infrared heaters are known for their energy efficiency and ability to provide targeted heating. Compared to traditional heating methods, such as gas or electric convection heating, medium wave infrared heaters can offer significant energy savings, resulting in lower operating costs for consumers.
- Rapid industrialization and commercialization:** With the growth of industrial and commercial sectors, there is an increasing demand for heating solutions that can provide efficient and effective heat transfer. Medium wave infrared heaters are widely used in industrial processes such as drying, curing, and heating of materials, as well as in commercial spaces like warehouses, garages, and outdoor seating areas.
- Quick and uniform heating:** Medium wave infrared heaters emit infrared radiation that can penetrate

objects and heat them directly, without the need for intermediate heating mediums. This results in faster and more uniform heating compared to traditional heating methods, making them popular in applications where quick heat-up times are required, such as in food processing, automotive, and paint curing industries. Versatility and flexibility: Medium wave infrared heaters can be designed and customized to suit various heating requirements. They can be integrated into existing systems or used as standalone heaters, making them versatile and adaptable to different industries and applications. This flexibility makes medium wave infrared heaters an attractive choice for businesses looking for heating solutions that can be easily integrated into their operations. Environmental sustainability: Medium wave infrared heaters are considered environmentally friendly compared to traditional heating methods. They produce zero emissions and do not release pollutants into the air, making them a preferred option for companies focused on reducing their carbon footprint and complying with environmental regulations. Technological advancements: The medium wave infrared heater industry is experiencing continuous technological advancements, leading to the development of more efficient and advanced heating solutions. These advancements include the integration of smart controls, improved reflector designs, and increased heating efficiency, further driving the demand for medium wave infrared heaters.
