The global Melanin market size is predicted to grow from US\$ 160 million in 2025 to US\$ 269 million in 2032; it is expected to grow at a CAGR of 7.9% from 2026 to 2032.

In 2024, global melanin production reached approximately 1,520 tons, with an average global market price of around US\$ 100,000 per ton. Melanin (CAS 8049-97-6) is a nitrogenous indolic polymer known as eumelanins, allomelanins, and pheomelanins. Melanin provides photoprotection from UV radiations by absorbing radiations from the electromagnetic spectrum, also effective against chemical stress and high temperature. Due to these properties, it is used in cosmetics, eyeglasses, and pharmaceutical products.

The global melanin market is driven by increasing demand across cosmetics, pharmaceuticals, and healthcare industries due to its natural UV-protective, antioxidant, and pigmentation properties. Melanin is widely used in skincare products, hair dyes, and as a functional ingredient in dietary supplements. Growth is supported by rising consumer preference for natural and bio-based ingredients, as well as ongoing research into novel applications such as bioelectronics, medical imaging, and protective coatings. The market is dominated by players in North America, Europe, and Asia-Pacific, with emerging markets showing strong growth potential.
