The global Melatonin API market size is predicted to grow from US\$ 111 million in 2025 to US\$ 181 million in 2031; it is expected to grow at a CAGR of 8.5% from 2025 to 2031.

The term 'API' in the context of pharmaceuticals stands for Active Pharmaceutical Ingredient. An Active Pharmaceutical Ingredient is the biologically active component of a drug, and it is responsible for its therapeutic effects. Melatonin is a hormone naturally produced in the pineal gland of the brain, and it plays a crucial role in regulating the sleep-wake cycle. When used in the context of pharmaceuticals, 'Melatonin API' refers to the active pharmaceutical ingredient of melatonin that is isolated and used as the primary therapeutic agent in medications.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
