The MELF Encapsulated NTC Thermistor is a type of thermistor encapsulated using MELF (Metal Electrode Leadless Flat) technology, offering stable temperature-resistance characteristics. It is widely used in temperature sensing, overheat protection, battery management systems, and applications in home appliances and automotive electronics. The MELF packaging provides higher mechanical strength and a smaller size, making it ideal for applications requiring compactness and precision. The NTC (Negative Temperature Coefficient) characteristic means that its resistance decreases as the temperature increases, enabling precise temperature control and fast response to temperature variations.
