Abstracts

The global Mellitic Acid market size is predicted to grow from US$ 70.43 million in 2025 to US$ 100 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Mellitic acid, also known as benzenehexacarboxylic acid (C?(COOH)?), is a fully carboxylated aromatic compound derived from the oxidation of hexamethylbenzene or graphite derivatives. It appears as a colorless crystalline solid and is highly stable due to its symmetric benzene core with six carboxylic acid groups. Mellitic acid is used as a precursor in organic synthesis, coordination chemistry, and in producing metal–organic frameworks (MOFs), polymers, and specialty coatings. The supply chain begins with raw materials such as benzene or toluene, which undergo oxidation using agents like nitric acid or permanganate to form mellitic acid. Midstream production involves purification, crystallization, and drying under controlled conditions to achieve high-purity analytical or industrial grades. Downstream applications include its use in polymer chemistry, catalysis, corrosion-resistant coatings, and as an intermediate for high-performance aromatic compounds and metal-organic complexes used in advanced materials and research sectors. In 2024, global Mellitic Acid output reached about 1,050 tons, with a capacity of 1,300 tons, priced at USD 42,000–98,000 per ton depending on purity and synthesis route. The market showed an average gross margin of 37%.

United States market for Mellitic Acid is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Mellitic Acid is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Mellitic Acid is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
