## Abstracts

The global Melonal market size is predicted to grow from US\$ 9.61 million in 2025 to US\$ 12.68 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

2,6-Dimethyl-5-heptenal is a pale yellow, oily organic compound with a strong, fresh, watermelon-like aroma and a green, aquatic feel. It is widely used as a flavoring agent in perfumes, cosmetics, and food, and is a core ingredient in creating marine-infused, fresh fruity scents.

The upstream industry mainly involves basic chemical raw materials and intermediates. Natural routes typically involve separation from essential oils containing this component (such as melon and cucumber extracts), but this is extremely costly and has limited supply. The mainstream industrial route is chemical synthesis, with core raw materials including isoprene, prodrug intermediates, or long-chain structures constructed through pericyclic reactions. The midstream industry involves the synthesis and purification of 2,6-dimethyl-5-heptenal. The technological barrier lies in the selective reduction and distillation separation of high-purity aldehydes, as impurities significantly disrupt its cool, fruity aroma.

Global sales in 2025 were approximately 3,076 tons, with an average selling price of US\$3,194 per ton. The industry's gross profit margin was around 20%.
