The global Melt-blown Sediment Filter market size is predicted to grow from US\$ 377 million in 2025 to US\$ 591 million in 2031; it is expected to grow at a CAGR of 7.8% from 2025 to 2031.

Melt-blown filters utilize depth gradients to remove sediment from water. These filters are made by blowing high-velocity gas through molten polymer, which forms intricately layered fibers. The inner core of melt-blown filters is denser than the outer core, so as water is processed through the filter walls, the filter is able to clarify increasingly finer particulate. The graded density of melt-blown filters, also known as spun filters, can filter down below 10 microns. They are ideal for filtering very fine particulate. Melt-blown filters are adept at filtering particulate of varying micron sizes because of their gradation.

Water treatment refers to the whole process of adopting different water treatment processes and chemicals based on the water quality of the water to be treated, so that the water quality meets the requirements of production, life and environment. Water treatment agent is the chemical used for water treatment, also known as water treatment agent, is widely used in chemical, petroleum, light industry, textile, printing and dyeing, construction, metallurgy, machinery, urban and rural environmental protection and other industries, in order to achieve the purpose of water conservation, corrosion and scale inhibition and treatment of wastewater. According to the use of classification, water treatment agents can be divided into flocculants, anti-scaling agents, corrosion inhibitors and so on. In addition, water treatment agents also include various auxiliary agents, including defoamers, cleaning agents, pre-film agents, chelating agents, decolorizers, activated carbon, disinfectants and so on. With the increasingly serious problem of global water shortage and the gradual increase in people's concern for the environment, the global demand for water treatment chemicals

continues to increase. According to the data, the global water treatment chemicals market in 2022 totaled about 40 billion U.S. dollars.
