## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The fluoropolymer is a fluorocarbon-based polymer with multiple carbon-fluorine bonds. It gets converted into melt-processable fluoropolymers when some processes take place. The melting process includes injection molding, compression molding, and extrusion molding. The fluoropolymers are ideal for protecting and insulating wires in order to prevent overheating and potential fires. Additionally, the product provides electrical insulating, chemical resistance, non-adhesiveness, low friction, flame resistance, and weather ability.
