The melt index tester is an instrument used to test the melt index. Melt Flow Index is a measure of the resistance (viscosity) of a polymer melt to flow at a given temperature and a given force for a predetermined period of time. Melt flow testing simply measures how well a polymer flows when it melts. The result of melt flow testing, known as melt mass flow rate (MFR) or melt volume flow rate (MVR), is defined as the mass or volumetric amount and pressure of polymer flowing through a small mold at a specified temperature.
