The global Melt Strength Enhancers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Melt strength enhancers are functional additives added to polymer melts to improve the strength and viscoelasticity of polymers in the molten state. By enhancing melt strength, these additives can prevent the melt from sagging, deforming or breaking during processing, which is especially important in processes such as foaming, blow molding, extrusion and thermoforming. Melt strength enhancers are commonly used in materials such as polypropylene (PP), polyethylene (PE), polyethylene terephthalate (PET) to improve their processing performance and enhance the mechanical properties and surface quality of the final product.

United States market for Melt Strength Enhancers is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
