The melt-blown filter material is composed of polypropylene microfibers randomly distributed and bound together. The appearance is white, smooth and soft. The material fiber fineness is 0.5-1.0 μ m. The random distribution of fibers provides more thermal bonding between fibers Chance, so that the melt-blown gas filter material has a larger specific surface area and higher porosity (?75%). After high-pressure electret filtration efficiency, the product has the characteristics of low resistance, high efficiency, high dust capacity and so on. The meltblown cloth extruder is mainly used to extrude thermoplastics such as soft, hard polyvinyl chloride, polyethylene and polypropylene, etc. It can be used as the main body of the melt-blown cloth. Processing a variety of plastic products, such as films, tubes, rods, plates, wires, tapes, cable insulation and hollow products, etc., can also be used for plastic granulation.
