Meltblown Polypropylene Filter Media is a nonwoven filtration material produced through the meltblown process using polypropylene resin. Its ultra-fine fibers create high filtration efficiency, low airflow resistance and excellent particle capture performance. The material is widely applied in air filtration, liquid filtration, medical protective products, industrial filtration cartridges and HVAC systems. Products may undergo electrostatic charging or composite lamination to enhance filtration performance for different application requirements.

The upstream supply chain includes polypropylene resin, masterbatches, additives and packaging materials. Midstream manufacturing covers meltblown extrusion, fiber formation, electrostatic treatment, lamination, slitting and quality testing. Downstream markets include medical filtration, respirators, HVAC filters, industrial air purification, water filtration and automotive cabin filtration. Market growth is driven by air quality improvement, healthcare demand and industrial filtration upgrades.
