Membrane filtration separation equipment is a device that uses a semipermeable membrane to separate, purify or concentrate different components in liquids or gases. By applying pressure or an electric field, the membrane only allows molecules of a specific size or property to pass through, blocking other substances, thereby achieving separation or concentration of dissolved substances. This equipment is widely used in water treatment, food processing, pharmaceuticals, chemicals and other industries to remove suspended solids, microorganisms, ions and organic matter, improve product purity, treat wastewater, or produce high-purity substances.

The global Membrane Filtration Separation Equipment market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
