A membrane switch is a switch made of membrane material. It is usually composed of several layers of different materials stacked together, including a conductive layer, an insulating layer, and a protective layer. The combination of these thin film materials enables the switch to provide a stable operating experience without taking up too much space. Imagine that early mechanical switches required a large amount of space, while membrane switches were like small magicians, condensing their functions onto a thin film. With the continuous advancement of technology, the application prospects of membrane switches are becoming increasingly broad. In the future, it will be used for more smart products, such as smart home devices and wearable devices, using membrane switches to enhance user experience.
