The global Memory Wafer Fabrication market size is predicted to grow from US\$ 47610 million in 2025 to US\$ 85260 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

The memory market includes companies that make memory chips in both non-leading and leading-edge tech. Samsung, SK hynix, Kioxia, and Micron are key manufacturers that produce memory chips. Memory chips can be further segmented into DRAM and NAND.

DRAM, which stands for dynamic random-access memory, is the active memory used while operating a device to store code for algorithms, processes, etc. When you open an app on your phone, DRAM is used.

NAND, also known as flash, which stands for NOT-AND, is the memory used to store large amounts of data over time, such as documents and photos. When you save a file to a USB drive, for example, NAND is used.

The memory market segment is driven by advancements in artificial intelligence and the widespread use of 5G and IoT (internet of things) devices globally. Global Market Insights reports the memory semiconductor market was valued at \$92 billion in 2023 and its value is projected to grow to \$200 billion by 2030.

This report studies the memory wafer fabrication/manufacturing.
