The global Memristor Devices market size is predicted to grow from US\$ 171 million in 2025 to US\$ 548 million in 2031; it is expected to grow at a CAGR of 21.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A memristor (named as a portmanteau of memory and resistor) is a non-volatile electronic memory device. Its resistance can be programmed (resistor function) and subsequently remains stored (memory function). Unlike other memories that exist today in modern electronics, memristors are stable and remember their state even if the device loses power.
