An accelerometer is a sensing element that measures the acceleration it experiences relative to freefall. The acceleration is measured as a vector that has magnitude and direction. MEMS (Micro-Electro Mechanical System) technology is based on a number of tools and methodologies, which are used to form small structures with dimensions in the micrometer scale (one millionth of a meter). This technology is now being utilized to manufacture state of the art MEMS-Based Accelerometers. MEMS-based accelerometers are available in 1-, 2- and 3-axis configurations, with analog or digital output, in low-g or high-g sensing ranges.

MEMS accelerometer is a micromechanical sensor used to measure the motion state of objects. It is widely used in consumer electronics products, such as mobile phones, tablets, game consoles, etc. By measuring acceleration, it can be used to determine the motion status of the device and implement functions such as screen rotation and game control.
