The global MEMS Hydrogen Leak Sensor market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

MEMS hydrogen leakage sensor is a semiconductor metal oxide gas sensor that can detect hydrogen leakage of hydrogen fuel cell vehicles. When semiconductor metal oxides adsorb oxygen, the resistivity will increase significantly. When hydrogen and other reducing gases reduce oxygen in the metal oxide chemisorption layer, the resistivity will change accordingly. The hydrogen gas concentration can be detected by detecting the change in resistance. MEMS hydrogen sensor is processed by MEMS technology, which discards the tedious manual links in the traditional sensor production process, and greatly improves the consistency and production efficiency of the sensor.
