Abstracts

The global MEMS Sensor Packaging market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The full name of MEMS is Micro Electro Mechanical System, which utilizes semiconductor manufacturing processes and materials to integrate sensors, actuators, mechanical mechanisms, signal processing, and control circuits into a micro device or system. Its internal structure is generally at the micrometer or even nanometer level. MEMS mainly consists of two parts: sensors and actuators. There are many types of MEMS sensors and there are also various classification methods. According to its working principle, it can be roughly divided into MEMS physical, chemical, and biological sensors. Each type of MEMS sensor can be divided into many subcategories, and different MEMS sensors can measure different quantities and achieve different functions.

The trend of miniaturization in MEMS is to reduce packaging size. In the wafer level packaging development process of MEMS sensors, the packaging cost accounts for approximately 30% to 40% of the total cost of MEMS sensors. Reducing the packaging size and area can reduce the cost of MEMS sensors and improve their sensitivity.
