The report requires updating with new data and is sent in 48 hours after order is placed.

We consider MEMS as devices that include moving parts (or fluids) in the μm - mm range, and which use a photolithography process for manufacturing. Only die-level components (first-level packaged device) are considered, not the full system around a MEMS device. Volume and prices pertain to a packaged MEMS (inclusion of electronics/ASIC is according to the component technology)
