The global Mens and Womens Compression Sock market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Compression socks for both men and women are specialized garments designed to improve blood circulation in the legs and feet by applying graduated pressure. These socks are constructed from elastic materials that exert gentle pressure on the legs, with the highest pressure at the ankle gradually decreasing towards the calf and thigh. The primary purpose of compression socks is to alleviate discomfort and reduce the risk of various circulatory issues, such as swelling, varicose veins, and deep vein thrombosis (DVT). They are commonly worn by individuals who spend long hours on their feet, such as athletes, travelers, healthcare workers, and those with certain medical conditions like diabetes or venous insufficiency. Compression socks work by helping the veins and leg muscles to move blood more efficiently towards the heart, preventing blood from pooling in the lower extremities. This can result in reduced swelling, less fatigue, and a lower risk of developing blood clots.

Global key players of compression socks include Sigvaris, Medi, Juzo, etc. The top three players hold a share about 61%. The global compression socks are mainly produced in United States, China and Europe, they occupied for a share over 91%. Europe is the largest market, has a share about 52%, followed by North America and China, with share 31% and 4%, separately.
