The global Mesalamine API market size is predicted to grow from US$ 188 million in 2025 to US$ 235 million in 2031; it is expected to grow at a CAGR of 3.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Mesalamine was approved for medical use in the United States in 1987. Mesalamine, also known as mesalazine or 5-aminosalicylic acid (5-ASA), is a medication used to treat inflammatory bowel disease, including ulcerative colitis and Crohn's disease. It is generally used for mildly to moderately severe disease. It is taken by mouth or rectally. The formulations which are taken by mouth appear to be similarly effective.

The global prevalence of IBD is rising, particularly in developed regions like North America and Europe, and increasingly in developing nations such as China and India. This increase is largely attributed to changes in lifestyle, dietary habits, and environmental factors, which are contributing to the growing demand for mesalazine.

With ulcerative colitis being the primary indication for mesalazine, the growing number of patients with this condition is directly driving market demand.

Global key players of Mesalamine are Syntese A/S, PharmaZell and Cambrex Corporation etc. The top 3 companies hold a share over 50%. The global Mesalamine are mainly produced in Europe and United States, they occupied for a share over 60%. Europe is the largest market, has a share about 43%, followed by Asia Pacific and North America, with share 31% and 12%, separately.
