According to our LPI (LP Information) latest study, the global Mesocarbon Microbeads market size was valued at US\$ 173.2 million in 2023. With growing demand in downstream market, the Mesocarbon Microbeads is forecast to a readjusted size of US\$ 362.7 million by 2030 with a CAGR of 11.1% during review period.

The research report highlights the growth potential of the global Mesocarbon Microbeads market. Mesocarbon Microbeads are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Mesocarbon Microbeads. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Mesocarbon Microbeads market.

MCMB (mesocarbon microbeads) synthetic graphite is prepared from petroleum pitch or coal tar. MCMB is one of the promising carbon anode materials for Li-ion batteries. MCMB has high specific capacity and a spherical morphology, which is beneficial for high packing density of the anode. The low surface area of MCMB can minimize the unfavorable side reactions during the charge-discharge process.

Global key players of mesocarbon microbeads include BTR New Material Group, Baotailong New Materials, China Steel Chemical, etc. Global top three manufacturers hold a share over 72%. The key players are mainly located in China, Japan and Taiwan. In terms of product, direct thermal condensation is the largest segment, with a share over 81%. And in terms of application, the largest application is battery anode material,

with a share over 63%.
