## Abstracts

The global Mesoporous Carbon market size is predicted to grow from US\$ 1401 million in 2025 to US\$ 1625 million in 2032; it is expected to grow at a CAGR of 2.2% from 2026 to 2032.

Mesoporous carbon is a promising material having multiple applications. It can act as a catalytic support and can be used in energy storage devices. Moreover, mesoporous carbon controls body's oral drug delivery system and adsorb poisonous metal from water and various other molecules from an aqueous solution.

Mesoporous carbon is expected to have important applications in catalyst supports, hydrogen storage materials, electrode materials, etc., so it is highly valued by people. In addition, the charge storage capacity of the electric double layer capacitor material made of the mesoporous material is higher than that of the assembled metal oxide particles, and is much higher than that of the commercially available metal oxide electric double layer capacitors.
